A11. Let (x_n) and (y_n) be a sequence of real numbers such that for every

Prove that

A10. For every real number ϵ define f_ϵ by the relation

Prove that f_ϵ is a well defined integrable function, then compute

A9. Let f and g there be given and the inequality

Prove that:

(i) If f holds whenever then

(ii) If g holds whenever then

A8. Find ξ with the intermediate value property such that

A7. Solve $\sin x = x$ in real numbers:

A6. Find all derivable functions f such that

A5. Let f_n be linear on each interval $[n, n+1]$ such that for every integer n with $f_n(n) = n$. Prove that f is antiderivable.

A4. Let A, B be matrices with real entries such that $A^2 = B^2$. Prove that

A3. Let A, B be matrices with complex entries such that $A^2 = B^2$. Prove that $A = B$ or

A2. Let a, b be elements of a ring R , a invertible, such that

whenever $a \mid b$. Prove that

A1. Let f be continuous such that for every reals x, y , there exist ξ, η such that

Prove that f is nondecreasing.
