A11. Let (x_n) and (y_n) be a sequence of real numbers such that for every n

Prove that

A10. For every real number a define $f(x)$ by the relation

Prove that $f(x)$ is a well defined integrable function, then compute

A9. Let $f(x)$ there be given $g(x)$ and the inequality

Prove that:

(i) If $f(x) > 0$ holds whenever then

(ii) If $f(x) < 0$ holds whenever then

A8. Find ξ with the intermediate value property such that

A7. Solve $\sin x = x$ in real numbers:

A6. Find all derivable functions $f(x)$ such that

A5. Let $f(x)$ be linear on each interval $[n, n+1]$ such that for every integer n with $f(n) = n$ Prove that $f(x)$ is antiderivable.

A4. Let A, B be matrices with real entries such that $A^2 = B^2$ Prove that

A3. Let A, B be matrices with complex entries such that $A^2 = B^2$ Prove that $A = B$ or

A2. Let a, b be elements of a ring R , a invertible, such that

whenever $a^n = b^n$ Prove that

A1. Let $f(x)$ be continuous such that for every reals a, b , there exist ξ, η with $f(\xi) = a$ and $f(\eta) = b$

Prove that $f(x)$ is nondecreasing.
